EDUCATION

Texas A&M University - College Station, TX

August 2020 – May 2024

Bachelor of Science in Computer Science - Minors: Cybersecurity, Mathematics

SKILLS

Developer Tools: AWS, Docker, Git, GitHub, Jira, PHPStorm, VS Code, XDebug

Frameworks: PyTorch, TensorFlow, React.js

Languages: C++, C#, JavaScript, PHP, Python, SQL (MySQL, PostgreSQL), TypeScript

Methodologies: Agile, Scrum, Waterfall, CI/CD, Test-Driven Development

Soft Skills: Communication, Leadership, Learning, Problem-Solving, Teamwork, Time Management

EXPERIENCE

Software Developer - Paycom

June 2024 – Present

Full-Stack Developer - PHP, JavaScript, React, MySQL

Dallas, TX

- Full-stack development using PHP, JavaScript, and React.js, on a team managing Paycom's client-facing payroll features
- Worked closely with 10+ developers, 3+ product managers, and 3 different quality assurance teams to maintain payroll functionality, improve upon existing systems, and add new features for clients
- Earned a 'communication' award for demonstrating excellence in communicating across departments, producing consistently high-quality results
- Modified 10000+ lines of code across 200+ files to enhance the accessibility of over 70% of Paycom's payroll-specific pages, resulting in 100% of the plain text being translatable based on the user's language preference

TAMU Capstone Program

January 2024 – May 2024

Industry-Sponsored by Bray International

College Station, TX

- Developed two machine learning models to classify the condition of the pneumatic ball and butterfly valves given their torque data during actuation
- Led a team of 5 as the product owner, coordinating efforts and delegating tasks throughout the project
- Implemented all data preprocessing methods, increasing the accuracies of our models from 95.03% and 99.05% to 99.94% and 100% respectively
- Operated under CI/CD principles, continuously delivering a product that passed 100% of unit and integration tests and improving the performance between sprints

PROJECTS

Point of Sale System | *React.js, JavaScript, PostgreSQL, Python, Git*

- Collaborated with a team of six in a school project to design and program a point-of-sale system with a PostgreSQL database
- Made a front-end website with React.js, connected to a back-end built on Express.js
- Built the button mapping component, allowing buttons to form dynamically based on the contents of the database
- Programmed Python scripts to populate a database with 1000+ data samples of simulated orders

AI Game Agent | *Reinforcement Learning, C#, Godot, PyTorch, Python*

- Initiated the development of an AI game agent that uses reinforcement learning to traverse a landscape
- Built a Deep Q-Network(DQN) using PyTorch and a simple game environment using the Godot Engine
- Utilized open-source programs to facilitate real-time TCP communication between my Python script and the game

Predictive Modeling with Machine Learning | *Neural Networks, PyTorch, Python*

- Aligned with two others to develop a highly effective machine learning model for predicting in-hospital mortality based on clinical health data (AUC-ROC score: 0.91522)
- Standardized and preprocessed a subset of eICU dataset with 50 columns of numerical data
- Implemented optimized neural network with tuned hyperparameters and Adam optimizer
